Examiner, Art Unit 1793

Applicants' remarks and amendments, filed on January 20, 2009, have been carefully considered. Claims 1-8, 14, 18, 19, 42-44, 49-51, and 60 have been canceled; new claims 65-68 have been added.

Claims 9-13, 15-17, 20-23, 45-48, 52-59, and 61-68 are now pending in this application.

Withdrawn Rejection

The 102(b) rejection of claims 1-9, 14, 17-23, and 42-64 as being anticipated by European Patent No. 0 164 200 stated in the previous Office Action has been withdrawn in view of Applicants' amendments to claims 9, 17, 21-23, 45-48, 52-59, and 61-64, and in view of Applicants' cancellation of claims 1-8, 14, 18, 19, 42-44, 49-51, and 60.

Claims 9, 17, 21-23, 45-48, 52-59, and 61-64 have been amended to depend from claims 10-13 and 15, which, in addition to claim 16, were objected to as being dependent upon rejected base claims.

Oath/Declaration

1. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

The Oath/Declaration claims priority to Document WO 2004-109829, which is the published form of PCT/US04/17876. This information should be removed from the

Art Unit: 1793

Oath/Declaration, as Applicants have indicated that the instant application is a national stage entry of said PCT application.

Allowable Subject Matter

2. Claims 9-13, 15-17, 20-23, 45-48, 52-59, and 61-68 are allowed.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or suggest the claimed catalyst comprising platinum, titanium, and tungsten, wherein the platinum concentration is between about 30 and 50 atomic percent, the titanium concentration is no greater than about 20 atomic percent, and the tungsten concentration is between about 40 and about 60 atomic percent.

The prior art also does not teach or suggest a supported electrocatalyst powder comprising the aforementioned catalyst and electrically conductive support particles upon which said catalyst is dispersed.

As stated in the previous Office Action, although European Patent No. 0 164 200 teaches a platinum based amorphous metal alloy oxygen anode having the formula $Pt_pA_aD_d$, wherein Pt is platinum, A can be, inter alia, W, Ti, and mixtures thereof, and D is B, C, Si, Al, Ge, P, As, Sb, Sn, and mixtures thereof, "p" ranges from about 40 to 92, "a" ranges from about 0 to 40, and "d" ranges from about 8 to 60, with the proviso that p

Art Unit: 1793

+ a + d = 100, the European Patent does not teach or suggest the as-now claimed atomic percentage ranges for platinum, titanium, and tungsten.

Additional prior art includes Maget et al. (U. S. Patent No. 3,274,031), which teaches a catalyst for a fuel cell electrode from particles of an alloy of a noble metal such as platinum, with a base metal such as titanium; the catalyst may also contain a corrosion-resistant metal such as tungsten (col. 2, lines 20-35).

The percentage amounts of these components do not fall within the as-now claimed atomic percentages. See col. 3, lines 35-43 and Claim 5 of Maget et al., the former citation teaching a percentage range of between about 4% and 10% for noble metal (e.g., platinum), from 25% to 50% titanium, and “the remainder being substantially all corrosion-resistant metal” (e.g., tungsten), and the latter citation teaching 25-50% titanium, 4-25% of noble metal, and the remainder corrosion-resistant metal.

Although Maget et al. do not disclose whether the percentage ranges are atomic-based or weight-based, the disclosed percentage ranges, assuming they are atomic percentages, do not fall within the as-now claimed atomic percentages. Assuming the disclosed percentages are weight-based, conversion of the disclosed percentage ranges to atomic percentages results in percentage ranges also falling outside the atomic percentage ranges recited in the instant claims (i.e., 2.2-3.9 % for platinum, 56-79.5% for titanium, and 16.6-41.6% for corrosion-resistant metal).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 1793

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
